

Global Cybersecurity Threats (2015–2024)

Audience:

Healthcare C-Suite Executives

Purpose:

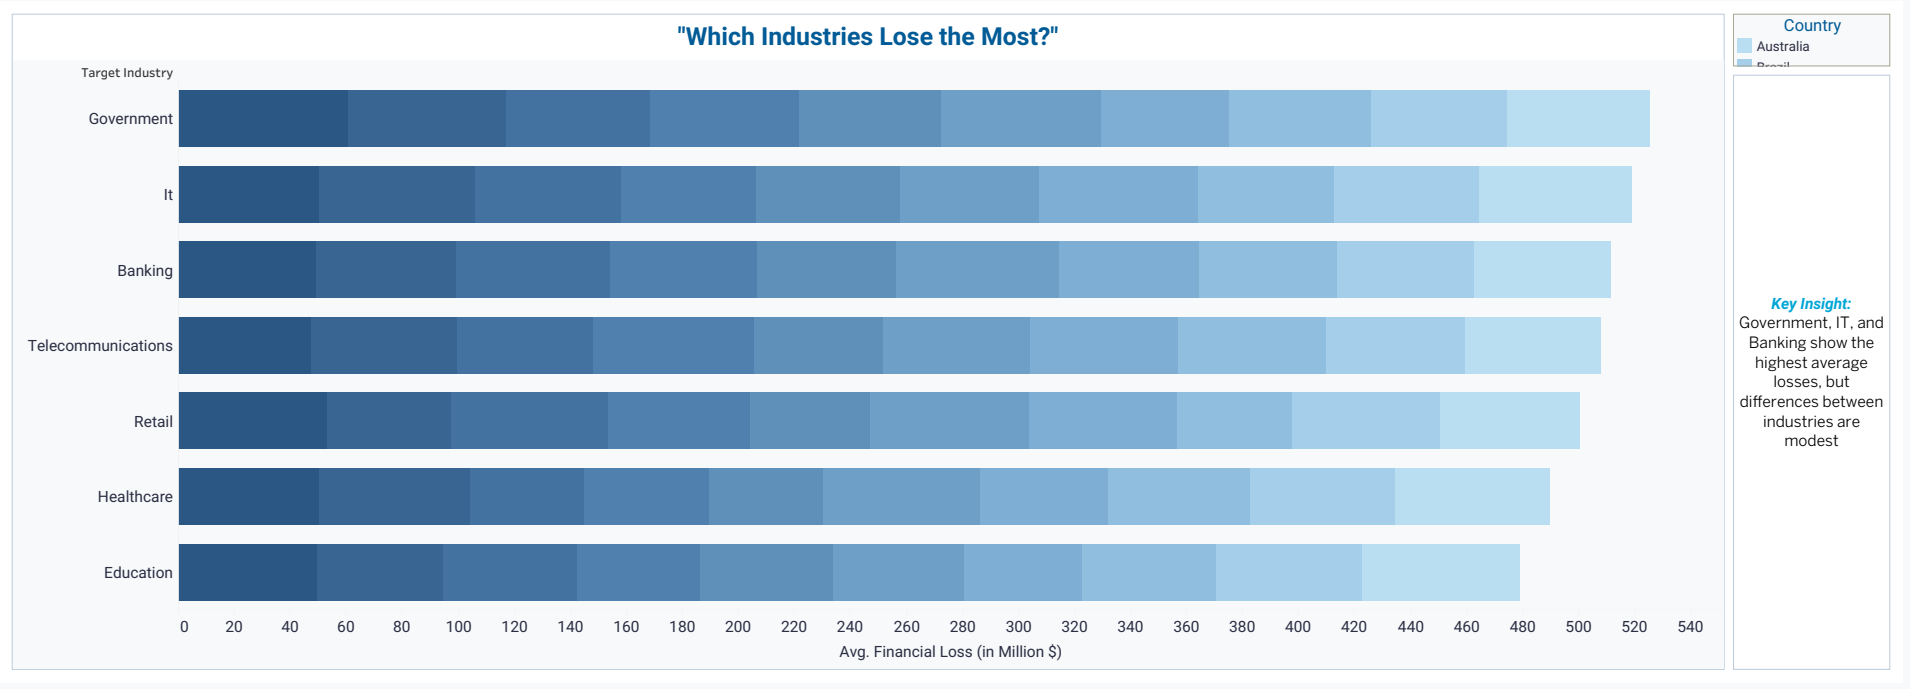

Reveal patterns in cyberattack severity, speed of response, and high-risk scenarios.

Ryan Wick

Global Cybersecurity Threats (2015–2024)

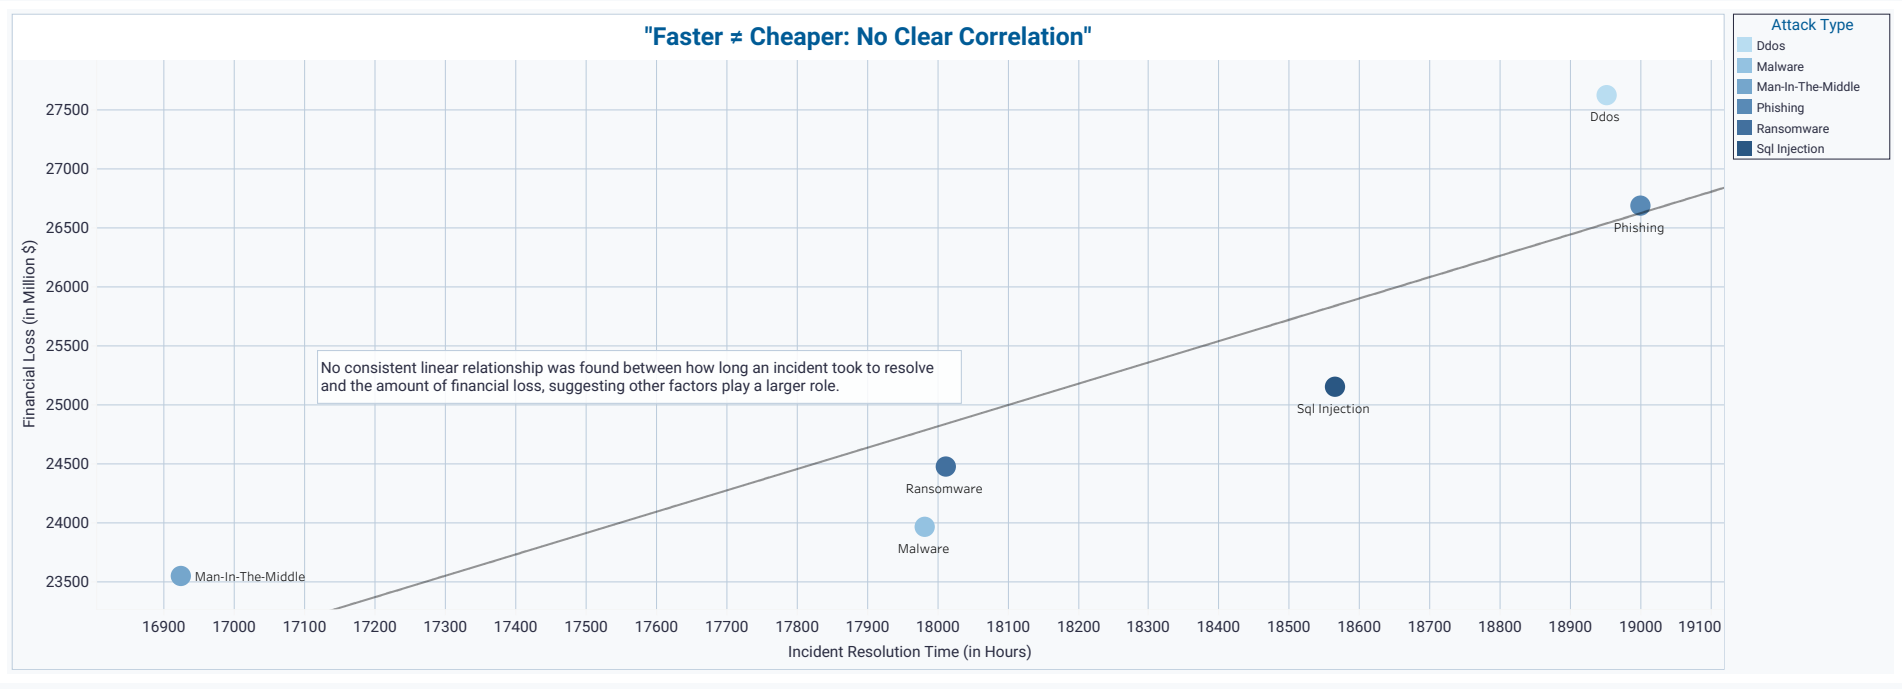

Global Cybersecurity Threats (2015–2024)

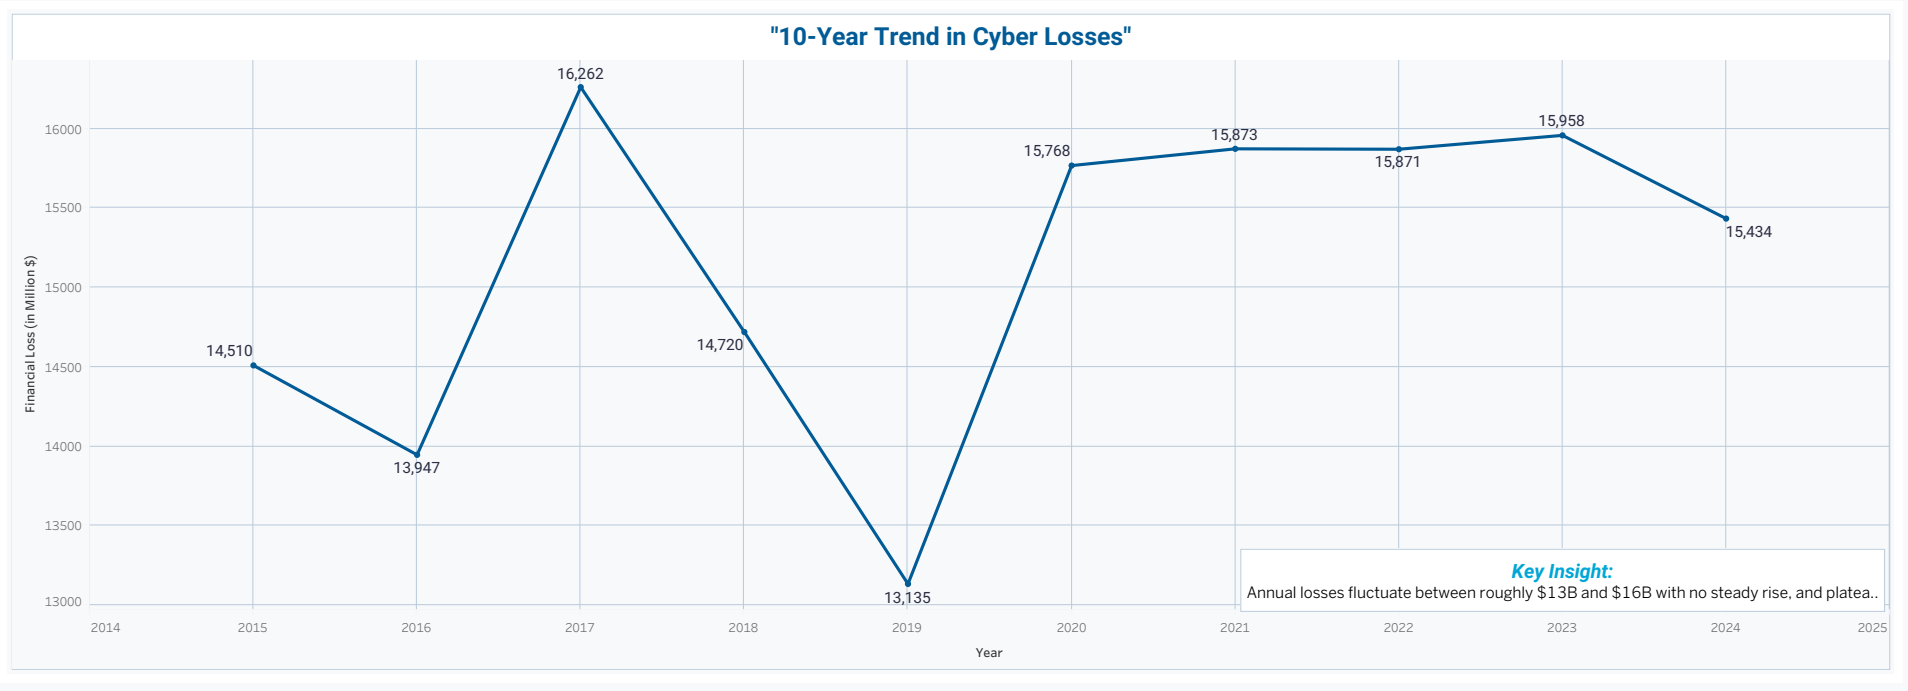

Key Insight: Resolution times are nearly identical across defense mechanisms. No single defense is clearly faster, so setup and response process likely matter more than tool type.

Global Cybersecurity Threats (2015–2024)

	Recommendations & Limitations	
	 Recommendations: Invest in proactive defenses Deploy real-time detection and response tools tailored to industry-specific threats. Prioritize resolution speed Fast incident handling doesn't always reduce cost, but builds long-term resilience. Leverage cluster-based monitoring Understand distinct threat patterns to improve resource allocation and triage.	 Limitations: Bias Data may be affected by self-reporting bias. Calculations Resolution time calculations vary by organization. Reporting Financial losses may be underreported or estimated.
